[Positive Shift]

'KLS helped yield record paddy'

Project will help fill 46,000 tanks, achieve green revolution, says KTR

STATE BUREAU
RAJANNA-SIRICILLA

Municipal Administration Minister KTR Rama Rao said Telangana had emerged as rice bowl of the country by producing record level of paddy. The Food Corporation of India has confirmed that it procured the highest quantity of paddy from the State. This was made possible only because of the construction of Kaleshwaram Lift Irrigation Scheme, he added.

As part of the project, Godavari water has been lifted to Kondapochamma Sagar reservoir located 68 metres above mean sea level from 82 metres at Medigadda. The project would help fill 46,000 tanks, achieve green revolution, develop agriculture and enhance fish and sheep production. The Minister made these comments after planting saplings along with Assembly Speaker Pocharam Srinivas Reddy in Avurur village on Friday.

Despite the financial crisis, the State government was continuing all welfare schemes. The State was experiencing some financial crisis during the last three

MA&UD Minister KTR Rama Rao and Assembly Speaker Pocharam Srinivas Reddy planting a sapling in Siricilla on Friday.

Rythu Bandhu amount was deposited in the bank accounts of 54,22 lakh farmers (Rs 5,000 to each farmer). On the other hand, loan amounts of 5.60 lakh farmers, having loan amount of up to Rs 25,000, have been waived.

Referring to the well-known slogan of Telangana writer Dasaradhi Rangacharya, 'Naa Telangana Kooti Ratanala Vina', the Minister said Chief Minister K Chandrababhan Rao was going ahead with a concept of 'Naa Telangana Kooti Ekarala Maganam Kavali' (provide water to one crore acres). As part of this, Chief Minister had sanctioned 11 check dams to be built on River Manan in the district.

On Haritha Haram, Rama Rao said the plantation of trees would be a success if women actively participate in the programme. Later, Rama Rao laid foundation stone for Urban Forest Park at Venkatapur.

Rama Rao said while other districts were having 24% forest cover, Siricilla had only 19.85%. To enhance forest cover, compensatory afforestation was taken up in 1,400 hectares in the district.

Forest land acquired for various projects in Peddapalli and Karimnagar was also compensated in the district. In order to provide fresh air, water and food to future generations by rejuvenating forest cover, the Chief Minister had introduced Haritha Haram six year ago and planted 182 crore saplings in the last five phases. The concepts of 'rasi', 'nakshatra' and 'smriti vanam' have also been introduced to encourage people to plant saplings.

Siricilla set to be Pocharam Speaker
Assembly Speaker Pocharam Srinivas Reddy said Siricilla was going to be 'Sirula Zilla' (rich district) under the leadership of Minister KTR Rama Rao.

The Speaker opined that never in the past such developmental works had taken place in the district. Over 50 lakh acres were going to be cultivated in two seasons. It was materialised only because of the construction of Kaleshwaram Lift Project. The drought-prone Siricilla had turned into a green field with the arrival of KLS water, he said.

Telangana green spots charm butterflies

T KARNAKAR REDDY
Sangamitya

"I dreamed I was a butterfly, flitting around in the sky; then I awoke. Now I wonder: Am I a man who dreamt of being a butterfly, or am I a butterfly dreaming that I am a man?" These were the words of 4th Century Chinese philosopher Zhuang Zhou, which stands testimony to the fact that butterflies have been creatures of fascination for humans for centuries.

According to studies, the world is home to over 15,700 species of butterflies and moths, and experts in the field have identified over 1,500 species in India alone. Closer home, lepidopterists, wildlife photographers and butterfly enthusiasts in Hyderabad joined hands to identify butterfly and moth species in Telangana and AP by forming the Butterfly Conservation Society, Hyderabad (BCS) in 2006. In the first year, they identified 180 kinds of butterflies and moths.

The BCS members continued to spot new species, and identified 180 species across Telangana in 2020. The Society has also been bringing out a newsletter every year on their work since 2019 and named it 'Thithile'. They published the second newsletter for 2020, the newsletter for 2020, the newsletter for 2020.

Tej Kumar, BCS-Hyderabad president, says "Developing habitat is very important for conservation of butterflies. Apart from planting tall trees, it is equally important to raise shrubs and herbs for their conservation."

Kalluri Subramanyam, founder member, says butterflies usually live in wet places and their role is very important in food chains. "It is a good prey for birds, spiders and

According to Butterfly Conservation Society, Telangana is home to 80 butterfly species.

many other insects and it is also a good pollinator. It feeds on a wide variety of plants," he adds.

Dr Suryakala says the Society was working towards increasing their tribe to document more butterflies and moths in Telangana. Dr Sailu says Anrabadi Tiger Reserve, Kawal Tiger Reserve, Pocharam Wildlife Sanctuary, where over 100 species were sighted officially, were hotspots for watching and documenting butterflies.

BCS, an active body
The BCS-Hyderabad has been conducting several activities to encourage documentation of butterflies and moths in Telangana and AP. They have identified over 180 species in the two States. The BCS has conducted several programmes to sensitise people on the conservation of butterflies and the role of butterfly as a pollinator. The BCS had organised an all India meet on butterflies at Maremidilli forest area in AP. The members participated in CoP-II in Hyderabad.
